A
one measure along the column: wide on means, so a broken gradient stays inside
95% interval for a new population's mean
pooled mean
lumbar gradient flattened
lumbar gradient reversed

B
pass rates against the bar real papers set; naming lives on the steps
real papers held out
populations the card draws
the papers' ideal spine
SchwingCheck's generator, true
SchwingCheck's generator, measured
nearest the papers, true
lumbar gradient flattened
lumbar gradient reversed
test
every test together (quartiles)
mean
sd
step
step bar 0.89
