A
sex, each paper's own men against its own women, papers pooled
endplate_lower (chen2011)
endplate (chen2011)
endplate_lower_depth (chen2011)
endplate_depth (chen2011)
disc_h_mean (bach2019, twomey1985)
disc_h_ant (bach2019)
disc_h_mid (bach2019)
foramen_h (bach2019)
disc_h_post (bach2019)
pedicle_w (duman2026)
0.0
0.5
1.0
1.5
2.0
men minus women, in within-sex SDs (Hedges' g), 95% interval
B
age and body size, each paper's own bands, papers pooled
pedicle_h, body height (yu2015)
pedicle_w, body height (yu2015)
pedicle_w, body weight (yu2015)
pedicle_h, body weight (yu2015)
body_area, age (griffith2016)
pedicle_h, age (yu2015)
pedicle_w, age (duman2026, yu2015)
disc_h_mid, age (bach2019)
disc_h_ant, age (bach2019)
disc_h_mean, age (bach2019)
disc_h_post, age (bach2019)
foramen_h, age (bach2019)
−0.2
0.0
0.2
0.4
0.6
change in within-band SDs (age per decade, body height per 100 mm, body weight per 10 kg), 95% interval
C
shape to sex: one point a printed stratum
pedicle_w
foramen_h
endplate_lower_depth
endplate_lower
endplate_depth
endplate
disc_h_post
disc_h_mid
disc_h_mean
disc_h_ant
in the population
held out, effect from other papers
0.3
0.4
0.5
0.6
0.7
0.8
0.9
1.0
AUC of telling men from women by this one measure at one level (0.5 is chance)
D
covariate to shape, where another paper prints the same measure
disc_h_mean from sex
pedicle_w from age
the population's own split
held out, effect from other papers
−0.8
−0.6
−0.4
−0.2
0.0
0.2
0.4
0.6
share of the measure's variance explained (R^2; below 0 is worse than ignoring it)
